Let's stick it to Steven Wolfram!

$$\mathrm{d}\left(\frac{0.50+\frac{1.00}{2.00}}{(x)^{2.00}}\right)/\mathrm{dx} = \frac{(-1.00)\cdot(x)^{2.00}\cdot\left(\frac{1.00}{x}\right)\cdot 2.00}{(x)^{2.00}\cdot(x)^{2.00}}$$
